KEYMIX[®] SOLQUIN[™]

*FOR THE TREATMENT AND PREVENTION OF CAECAL AND INTESTINAL
COCCIDIOSIS IN POULTRY*

PRESENTATION: Yellow to orange, free-flowing powder.

ACTIVE INGREDIENTS: Each kg contains:

SULPHAQUINOXALINE	145.0 g
DIAVERIDINE	36.0 g
MENADIONE (VITAMIN K)	3.6 g

PROPERTIES: Sulphaquinoxaline and diaverdine act synergistically in the treatment of coccidia because each drug acts on a different stage of a single metabolic pathway of the parasite. Diaverdine interferes with folic acid metabolism, whilst sulphaquinoxaline blocks p-aminobenzoic acid (PABA) metabolism. This allows for an effective reduction in the dose of sulphaquinoxaline, which would be much higher if the drug was used alone. The inclusion of vitamin K (menadione) in the formula assists the birds to counter the haemorrhagic effects of infection with the coccidia.

DOSAGE AND ADMINISTRATION:

DO NOT MEDICATE BIRDS PRODUCING OR MAY IN THE FUTURE PRODUCE EGGS OR EGG PRODUCTS FOR HUMAN CONSUMPTION.

For the treatment of outbreaks of both caecal and intestinal coccidiosis in poultry. Intermittent treatment (every fourth day), can be used to control coccidia by breaking their life cycle, thus allowing immunity to develop.

Add 500 g KEYMIX[®] SOLQUIN[™] to 900 L of drinking water (50 g to 90 L) for 5 days. Follow with three days on plain water then repeat treatment for another 5 days. First mix each 500 g with 5–10 L and stir well before adding to the remainder of the water. Only medicated water should be available during treatment.

WITHHOLDING PERIOD: DO NOT USE less than 7 days before slaughter for human consumption.

DO NOT USE in birds which are producing or may in the future produce eggs or egg products for human consumption.

TRADE ADVICE: EXPORT SLAUGHTER INTERVAL (ESI): This product does not have an ESI established. For advice on the ESI contact the manufacturer on (02) 9672 7944 before using the product.

POISONS SCHEDULE: S4.

REGULATORY STATUS: AUSTRALIAN PESTICIDES & VETERINARY MEDICINES AUTHORITY.
